TABLE OF CONTENTS

ABOUT THE AUTHORS, XI

Harry L. Cheddie, P.Eng., CFSE, xi
Paul Gruhn, P.E., CFSE, xi

CHAPTER 1 INTRODUCTION, 1

1.1 What Is a Safety Instrumented System?, 2
1.2 Who This Book Is For, 4
1.3 Why This Book Was Written, 4
1.4 Confusion in the Industry, 6
1.4.1 Technology Choices, 6
1.4.2 Redundancy Choices, 6
1.4.3 Field Devices, 6
1.4.4 Test Intervals, 7
1.4.5 Conflicting Vendor Stories, 7
1.4.6 Certification vs. Prior Use, 7
1.5 Industry Guidelines, Standards, and Regulations, 8
1.5.1 HSE - PES, 8
1.5.2 AIChE - CCPS, 8
1.5.3 IEC 61508, 9
1.5.4 ANSI/ISA-84.00.01-2004 (IEC 61511 Mod) & ANSI/ISA-84.01-1996, 9
1.5.5 NFPA 85, 10
1.5.6 API RP 556, 11
1.5.7 API RP 14C, 11
1.5.8 OSHA (29 CFR 1910.119 - Process Safety Management of Highly Hazardous Chemicals), 11
1.6 Standards Are Changing Their Direction, 13
1.7 Things Are Not As Obvious As They May Seem, 14
1.8 The Danger of Complacency, 15
1.9 There's Always More to Learn, 16
Summary, 17
References, 17

CHAPTER 2 DESIGN LIFECYCLE, 19

2.1 Hindsight/Foresight, 20
2.2 Findings of the HSE, 21
2.3 Design Lifecycle, 24
2.3.1 Hazard & Risk Analysis, 25
2.3.2 Allocation of Safety Functions to Protective Layers, 26
2.3.3 Develop Safety Requirements Specification, 26

2.3.4 SIS Design & Engineering, 27
2.3.5 Installation, Commissioning, and Validation, 28
2.3.6 Operations and Maintenance, 28
2.3.7 Modifications, 28
2.3.8 Decommissioning, 28
Summary, 29
References, 29

CHAPTER 3 PROCESS CONTROL VS. SAFETY CONTROL, 31

3.1 Control and Safety Defined, 32
3.2 Process Control - Active/Dynamic, 34
3.2.1 The Need for (and Ease of) Making Frequent Changes, 34
3.3 Safety Control - Passive/Dormant, 34
3.3.1 The Need for Restricting Changes, 35
3.3.2 Demand Mode vs. Continuous Mode, 36
3.4 Separation of Control and Safety Systems, 37
3.4.1 HSE - PES, 37
3.4.2 AIChE - CCPS, 38
3.4.3 IEC 61508, 39
3.4.4 ANSI/ISA-84.00.01-2004, 39
3.4.5 API RP 14C, 40
3.4.6 API RP 554, 41
3.4.7 NFPA 85, 41
3.4.8 IEEE 603, 42
3.5 Common Cause and Systematic/Functional Failures, 42
3.5.1 Human Issues, 43
Summary, 44
References, 45

CHAPTER 4 PROTECTION LAYERS, 47

4.1 Prevention Layers, 50
4.1.1 Process Plant Design, 51
4.1.2 Process Control System, 51
4.1.3 Alarm Systems, 52
4.1.4 Procedures, 53
4.1.5 Shutdown/Interlock/Instrumented Systems (Safety Instrumented Systems – SIS), 54
4.1.6 Physical Protection, 55
4.2 Mitigation Layers, 55
4.2.1 Containment Systems, 55
4.2.2 Scrubbers and Flares, 55
4.2.3 Fire and Gas (F&G) Systems, 55
4.2.4 Evacuation Procedures, 56

4.3 Diversification, 57
Summary, 58
References, 59

CHAPTER 5 DEVELOPING THE SAFETY REQUIREMENT SPECIFICATIONS, 61

5.1 Introduction, 61
5.2 Why Are 44% of Accidents Caused by Incorrect Specifications?, 63
5.2.1 Management Systems, 64
5.2.2 Procedures, 65
5.2.3 Scheduling of Assessment, 65
5.2.4 Participation of Key Personnel in the Review Process, 66
5.2.5 Responsibilities Not Well Defined, 66
5.2.6 Training and Tools, 66
5.2.7 Complexity and Unrealistic Expectations, 67
5.2.8 Incomplete Documentation, 67
5.2.9 Inadequate Final Review of Specification, 69
5.2.10 Unauthorized Deviation from Specification, 70
5.3 ANSI/ISA-84.00.01-2004, Parts 1-3 (IEC 61511 Mod) Requirements, 70
5.4 Documenting the Specification Requirements, 72
Summary, 73
References, 73

CHAPTER 6 DETERMINING THE SAFETY INTEGRITY LEVEL (SIL), 75

6.1 Introduction, 76
6.2 Who's Responsible?, 77
6.3 Which Technique?, 78
6.4 Common Issues, 78
6.5 Evaluating Risk, 79
6.5.1 Hazard, 79
6.5.2 Risk, 79
6.5.3 Fatality Rates, 80
6.5.4 Risks Inherent in Modern Society, 82
6.5.5 Voluntary vs. Involuntary Risk , 83
6.5.6 Tolerable Levels of Risk, 83
6.5.7 Tolerable Risk in the Process Industries, 84
6.6 Safety Integrity Levels, 86
6.7 SIL Determination Method #1: As Low As Reasonably Practical (ALARP), 87
6.8 SIL Determination Method #2: Risk Matrix, 89
6.8.1 Evaluating the Frequency, 89
6.8.2 Evaluating the Severity, 90
6.8.3 Evaluating the Overall Risk, 90

6.8.4 Evaluating the Effectiveness of Additional Layers, 91
6.9 Method #2: Risk Graph, 93
6.10 Method #3: Layer of Protection Analysis (LOPA), 95
6.10.1 Tolerable Risk, 95
6.10.2 Initiating Event Frequencies, 96
6.10.3 Performance of Each Safety Layer, 97
6.10.4 Example Using LOPA, 98
Summary, 100
References, 102
Additional Background Material, 102

CHAPTER 7 CHOOSING A TECHNOLOGY, 103

7.1 Pneumatic Systems, 104
7.2 Relay Systems, 105
7.3 Solid-state Systems, 106
7.4 Microprocessor/PLC (Software-based) Systems, 108
7.4.1 Flexibility: Cure or Curse?, 109
7.4.2 Software Issues, 109
7.4.3 General-Purpose PLCs, 111
7.4.4 Safety PLCs, 114
7.5 Issues Related to System Size, 117
7.6 Issues Related to System Complexity, 118
7.7 Communications with Other Systems, 119
7.8 Certified vs. Prior Use, 120
Summary, 121
References, 122

CHAPTER 8 INITIAL SYSTEM EVALUATION, 123

8.1 Things Are Not as Obvious as They May Seem, 124
8.2 Why Systems Should be Analyzed Before They're Built, 127
8.2.1 Caveats, 127
8.3 Where to Get Failure Rate Information, 129
8.3.1 Maintenance Records, 129
8.3.2 Vendor Records, 129
8.3.3 Third-party Databases, 130
8.3.4 Military Style Calculations, 130
8.4 Failure Modes, 131
8.4.1 Safe/Dangerous Failures, 131
8.4.2 Detected/Undetected Failures, 132
8.5 Metrics, 133
8.5.1 Failure Rate, MTBF, and Life, 135
8.6 Degree of Modeling Accuracy, 136
8.7 Modeling Methods, 137

8.7.1 Reliability Block Diagrams, 138
8.7.2 Fault Trees, 138
8.7.3 Markov Models, 139
8.8 The Real Impact of Redundancy, 139
8.9 Basic Formulas, 143
8.9.1 Impact Due to Manual Test Duration, 144
8.10 Analysis of a Relay System, 145
8.11 Analysis of a Non-redundant PLC System, 146
8.12 Analysis of a TMR System, 147
8.12.1 Common Cause, 148
8.13 Field Devices, 150
8.13.1 Partial Stroking of Valves, 152
8.14 Fault Tolerance Requirements, 153
8.15 Sample SIS Design Cookbook, 155
8.16 Engineering Tools Available for Analyzing System Performance, 156
Summary, 156
References, 157

CHAPTER 9 ISSUES RELATING TO FIELD DEVICES, 159

9.1 Introduction, 159
9.2 Importance of Field Devices, 161
9.2.1 Impact of Field Devices on System Performance, 161
9.2.2 Percentage Split of System Failures, 162
9.3 Sensors, 163
9.3.1 General, 163
9.3.2 Switches, 165
9.3.3 Transmitters, 166
9.3.4 Sensor Diagnostics, 167
9.3.5 Smart Transmitters, 169
9.4 Final Elements, 170
9.4.1 General, 170
9.4.2 Valve Diagnostics, 171
9.4.3 Smart Valve Positioners, 172
9.5 Redundancy, 173
9.5.1 Voting Schemes and Redundancy, 173
9.6 Design Requirements for Field Devices, 177
9.6.1 Sensor Design Requirements, 178
9.6.2 Final Element Design Requirements, 179
9.7 Installation Concerns, 181
9.8 Wiring of Field Devices, 181
Summary, 182
References, 182

CHAPTER 10 ENGINEERING A SYSTEM, 185

10.1 General Management Considerations, 186
10.1.1 Job Timing and Definition, 187
10.1.2 Personnel, 187
10.1.3 Communication Between Parties, 187
10.1.4 Documentation, 187
10.2 General Hardware Considerations, 188
10.2.1 Energized vs. De-energized Systems, 188
10.2.2 System Diagnostics, 189
10.2.3 Minimize Common Cause, 190
10.2.4 Panel Size and Layout, 190
10.2.5 Environmental Considerations, 191
10.2.6 Power, 192
10.2.7 Grounding, 192
10.2.8 Selection of Switches and Relays, 192
10.2.9 Bypasses, 193
10.2.10 Functional Testing, 194
10.2.11 Security, 194
10.2.12 Operator Interfaces, 195
10.3 General Software Considerations, 196
10.3.1 Software Lifecycle, 196
10.3.2 Program and Language Types, 198
10.3.3 Quantifying Software Performance, 199
10.3.4 Testing Software, 200
Summary, 201
References, 201

CHAPTER 11 INSTALLING A SYSTEM, 203

11.1 Introduction, 203
11.2 Terminology, 205
11.3 Factory Acceptance Testing (FAT), 206
11.4 Installation, 208
11.4.1 Installation Checks, 209
11.5 Validation/Site Acceptance Tests (SAT), 209
11.5.1 Necessary Documentation, 210
11.6 Functional Safety Assessment/Pre-startup Safety Review (PSSR), 211
11.7 Training, 212
11.8 Handover to Operations, 213
11.9 Startup, 214
11.10 Post Startup Activities, 214
Summary, 215
References, 215

CHAPTER 12 FUNCTIONAL TESTING, 217

12.1 Introduction, 218
12.2 The Need for Testing, 218
12.2.1 ANSI/ISA-84.00.01-2004 Requirements for Functional Testing, 221
12.2.2 General Guidelines, 223
12.3 Establishing Test Frequencies, 224
12.4 Responsibilities for Testing, 225
12.5 Test Facilities and Procedures, 225
12.6 Documentation, 227
12.6.1 Sample Test Procedure Documentation, 228
Summary, 229
References, 230

CHAPTER 13 MANAGING CHANGES TO A SYSTEM, 231

13.1 Introduction, 232
13.2 The Need for Managing Changes, 232
13.3 When Is MOC Required?, 234
13.4 When Is MOC Not Required?, 234
13.5 ANSI/ISA-84.00.01-2004 Requirements, 235
13.6 MOC Procedure, 238
13.7 MOC Documentation, 239
Summary, 240
References, 240

CHAPTER 14 JUSTIFICATION FOR A SAFETY SYSTEM, 241

14.1 Introduction, 242
14.2 Safety System Failure Modes, 243
14.3 Justification, 246
14.4 Responsibilities for Justification, 246
14.5 How to Justify, 247
14.6 Lifecycle Costs, 249
14.7 Review Example, 251
14.8 Detailed Lifecycle Cost Analysis, 255
14.9 Optimizing Safety, Reliability, and Lifecycle Costs, 258
Summary, 258
References, 258

CHAPTER 15 SIS DESIGN CHECKLIST, 261

Introduction, 261
Overview, 262
Section 1: Management Requirements , 263
Section 2: Safety Requirements Specification, 264
Section 3: Conceptual SIS Design, 265

Section 4: Detailed SIS Design, 266
Section 5: Power & Grounding, 267
Section 6: Field Devices, 268
Section 7: Operator Interface, 269
Section 8: Maintenance/Engineering Interface, 269
Section 9: Communications, 270
Section 10: Hardware Specification, 271
Section 11: Hardware Manufacture, 272
Section 12: Application Logic Requirements, 272
Section 13: Embedded (Vendor) Software, 273
Section 14: Software Coding, 274
Section 15: Factory Test, 275
Section 16: Installation & Commissioning, 276
Section 17: Operations & Maintenance, 278
Section 18: Testing, 280
Section 19: Management of Change, 281
Section 20: Decommissioning, 282
References, 282

CHAPTER 16 CASE STUDY, 283

16.1 Introduction, 284
16.2 The Safety Lifecycle and Its Importance, 284
16.3 Case Description: Furnace/Fired Heater Safety Shutdown System, 286
16.4 Scope of Analysis, 288
16.5 Define Target SILs, 289
16.6 Develop Safety Requirement Specification (SRS), 290
16.7 SIS Conceptual Design, 293
16.8 Lifecycle Cost Analysis, 296
16.9 Verify that the Conceptual Design Meets the SIL, 296
16.10 Detailed Design, 298
16.11 Installation, Commissioning and Pre-startup Tests, 299
16.12 Operation and Maintenance Procedures, 299
Summary, 301
References, 302

INDEX, 303
