Preface ix

Diagrammatic symbols xiii

Abbreviations and terms used in this book xv

1 The basics of steam generation and use 1
- 1.1 Why an understanding of steam is needed 1
- 1.2 Boiling: the change of state from water to steam 2
- 1.3 The nature of steam 4
- 1.4 Thermal efficiency 9
- 1.5 The gas turbine and combined-cycle plants 10
- 1.6 Summary 12

2 The steam and water circuits 13
- 2.1 Steam generation and use 13
- 2.2 The steam turbine 15
- 2.3 The condensate and feed-water system 17
- 2.4 The feed pumps and valves 21
- 2.5 The water and steam circuits of HRSG plant 21
- 2.6 Summary 23

3 The fuel, air and flue-gas circuits 25
- 3.1 The furnace 25
- 3.2 The air and gas circuits 27
- 3.3 Fuel systems 35
- 3.4 Igniter systems 44
- 3.5 Burner-management systems 45
- 3.6 Gas turbines in combined-cycle applications 46
- 3.7 Summary 46

4 Setting the demand for the steam generator 49
- 4.1 Nature of the demand 49

4.2	Setting the demand in power-station applications	50
4.3	The master demand in a power-station application	53
4.4	Load demand in combined heat and power plants	59
4.5	Waste-to-energy plants	60
4.6	Summary	61
5	**Combustion and draught control**	63
5.1	The principles of combustion control	64
5.2	Working with multiple fuels	79
5.3	The control of coal mills	81
5.4	Draught control	91
5.5	Binary control of the combustion system	95
5.6	Summary	100
6	**Feed-water control and instrumentation**	103
6.1	The principles of feed-water control	103
6.2	One, two and three-element control	103
6.3	Measuring and displaying the drum level	112
6.4	The mechanisms used for feed-water control	121
6.5	Pumps	127
6.6	De-aerator control	131
6.7	Summary	134
7	**Steam-temperature control**	135
7.1	Why steam-temperature control is needed	135
7.2	The spray-water attemperator	136
7.3	Temperature control with tilting burners	150
7.4	Controlling the temperature of reheated steam	151
7.5	Gas recycling	152
7.6	Summary	152
8	**Control equipment practice**	153
8.1	A typical DCS configuration	153
8.2	Interconnections between the systems	157
8.3	Equipment selection and environment	158
8.4	Mechanical factors and ergonomics	159
8.5	Electrical actuators	168
8.6	Hydraulic actuators	168
8.7	Cabling	169
8.8	Electromagnetic compatibility	169
8.9	Reliability of Systems	172
8.10	Summary	180

9 Requirements definition and equipment nomenclature 183
9.1 Overview 183
9.2 Defining the requirements 183
9.3 The KKS equipment identification system 186
9.4 Summary 195

10 Upgrading and refurbishing systems 197
10.1 The reasons behind the changes 198
10.2 Living with change 199
10.3 Making the decision to change 201
10.4 A refurbishment case study 202
10.5 Why refurbish? 204
10.6 Documenting the present system configuration 205
10.7 Summary 205
